1 Introduction

Amika is an enteral feeding pump with a holder power and disposables dedicated to enteral feeding and hydration. The intended use of Amika pump and sets is to deliver nutrition and hydration fluids to the patient through a feeding tube, in a safe, instinctive and convenient manner.

1.1 Scope

These Instructions for Use (IFU) are applicable to the Amika pump referred to as pump with software and hardware versions 2.2 / i.

**WARNING**
- Check that these IFU are applicable to the current Amika software version.
- The software and hardware versions of the pump are displayed in the technical information menu described in *Technical information* on page 34.
- The user must follow the instructions specified in this IFU. Failure to observe these instructions may result in damage to the equipment, injury to patients or injury to users. Specific texts are highlighted using the symbols described in *Symbol descriptions* on page 2.

1.2 Intended use

Amika enteral feeding pump is intended for use on adults and pediatrics to deliver nutrition and hydration fluids to the patient through an enteral route of administration using a feeding tube.

It is intended for use by both qualified and trained healthcare professionals in clinical healthcare facilities, in ambulatory use with an Amika Backpack and in pre-hospital medical ground transportation and home users in homecare.

1.3 Intended user population

**WARNING**
Keep the pump, sets and AC/DC adapter away from unsupervised children (and animals).

The pump must only be used and cleaned by trained healthcare professionals, patients or patient relatives.

It is recommended that users attend a single training session of about 40 minutes (For training, contact your Fresenius Kabi sales representative).

1.4 Intended patient population

The pump can be used on one patient at a time and on multiple patients during its lifetime.
The pump can be used on patients requiring enteral feeding and enteral hydration. The intended patient population includes patients who get enteral nutrition parallel to IV insulin administration. Those patients require special attention during the feeding process.

1.5 Principles of Operation

The device is a peristaltic pump dedicated to enteral feeding.

The pump is used to administer to patient (humans only) a volume of nutrition at a programmed flow rate.

The pump is designed to administer fluids through trans-nasal or percutaneous feeding tube.

The pump is designed to administer any kind of enteral nutrition fluids, including drinking water (still and sparkling), tea, soda, fresh water and the whole product range of ready nutrition from Fresenius Kabi.

1.6 Contraindications

DO NOT USE:

- for the intravenous administration of infusion fluids;
- if enteral feeding is contraindicated by medical prescription;
- with premature (born < 37 weeks of pregnancy) and neonates (<1 month);
- in Magnetic Resonance Imaging (MRI) environments;
- in ambulances, helicopters, aircrafts and hyperbaric chambers;
- in areas where there is a risk of explosion.

1.7 Use environment

The Amika AC/DC adapter is not meant to be used outdoors (such as in the garden, on the patio).

<table>
<thead>
<tr>
<th>WARNING</th>
</tr>
</thead>
<tbody>
<tr>
<td>Keep away from heat sources, dust, fluff, direct and prolonged light exposure.</td>
</tr>
<tr>
<td>The pump should be used under specified operational, storage and transport conditions listed below to ensure pump performance.</td>
</tr>
<tr>
<td>At the limit of the operating temperature range, physical properties of set’s tube may change; in such condition, alarms are more likely to happen.</td>
</tr>
</tbody>
</table>

- Temperature operating range: 10°C to 40°C
- Storage and transport temperature: -20°C to +45°C
- Pressure operating range: 700 hPa to 1060 hPa
- Storage and transport pressure: 500 hPa to 1060 hPa
- Humidity operating range: 30% to 85%, no condensation
- Storage and transport humidity: 10% to 90%, no condensation
Altitude: maximum 3000 m.

In case of refrigerated products, allow the product to reach the operating temperature range before use.

When the pump is stored at extreme temperature (-20°C and +45°C), wait for 2 hours to allow the product to reach the operating temperature range before using the pump. An intertempestive alarm can be triggered if the pump/giving set temperature is too low or too high.
2 Description

2.1 System definition

The Amika system is composed of the following components:

- Amika pump: enteral feeding pump with pump holder and AC/DC adapter.
- Amika disposable (applied part): giving sets.
- Amika accessories.

For more information on accessories, refer to their respective accompanying documents.

2.2 Packaging content

Packaging consists of: recycled cardboard.

Symbols used on Amika packaging are described in Symbol descriptions on page 2.

4. Back
3 Installation and removal

Installation and removal must only be done when the patient is not connected.

3.1 Installation

3.1.1 Global installation

Ensure that the appropriate positions between patient, pump, giving set and container are maintained.

**WARNING**

- Do not vary the pump height while a patient is connected to it. This may lead to false alarms and will alter flow rate accuracy.
- Check the stability of the whole system. If the container is positioned lower than 0.5 m beneath the pump, this can lead to flow rate deviation.
- Give particular attention to the risk of strangulation with cables and sets, and with the small parts that could be swallowed or inhaled.

![Figure 2: Recommended installation](image)

Place the container above the pump

![Figure 3: Possible installation](image)

The container can be placed down to 0.5 m beneath the pump

Do not place the pump below the patient or more than 1.3 meter above the patient.

3.1.2 Using the pole clamp

The holder can be attached universally, vertically and horizontally. Turn the pole clamp to the suitable position.
3.1.3 Positioning the holder on a rail, pole, bed or wheelchair

Ensure the holder is positioned so that the display is at the suitable height to ensure good visibility and orientation in the reading direction (the contact pins are at the bottom).

X, Y min = 10 mm  
X, Y max = 35 mm  
Ø min = 8 mm  
Ø max = 40 mm

1. Fasten pole clamp firmly on the pole or rail to avoid any movement of the pump.  
2. Ensure that the pump is securely attached and positioned.

3.1.4 Positioning the holder on a table

The holder can be placed on a flat and horizontal table as indicated in the figure. Ensure the pump is positioned away from table edges to avoid being accidentally pushed off the table.

3.1.5 Positioning the pump

Slide the pump down until the grey locking lever locks the position.

3.1.6 Electrical connection

Ensure AC/DC adapter is not damaged and is compatible with local voltage range. To charge battery or to use the pump on the mains power supply:
1. Connect AC/DC adapter to the holder.
2. Plug the AC/DC adapter to the mains socket. When connecting to the mains, ensure that the AC/DC adapter and the power socket are easily accessible. The mains power supply is indicated by a green light on the pump's front panel (keypad).

3.2 Removal

3.2.1 Removing the pump from the pump holder
1. Push the grey locking lever.
2. Pull the pump up.
3.2.2 Removing the pump holder

3.2.3 Electrical disconnection

1. Remove AC/DC adapter from power socket.
   - A beep is emitted by the pump when the AC/DC adapter is disconnected.
   - To store the pump, see *Storage* on page 57.

2. Remove AC/DC adapter from holder.

3.2.4 Attaching / Removing the Quick Guide

A quick guide can be easily attached and removed from the pump holder.
4 Operations

4.1 Use of internal battery

4.1.1 Battery precautions

Before using the pump on battery for the first time, charge the battery until it is fully charged (approximately 6 hours).

Keeping the pump connected to mains when not in use is recommended in order to maintain battery charge. The battery is charging continuously ensuring its maximum capacity.

4.1.2 Battery operating mode

The icon 🌟 is always displayed in the status bar. The device can be used while battery is charging.

<table>
<thead>
<tr>
<th>Battery life</th>
<th>24 hours ± 5% until 125 mL/h and a minimum of 8 hours for flow rates above 125 mL/h (in standard feeding conditions, at 22.5°C ± 2.5°C)</th>
</tr>
</thead>
</table>
| 🌟 (green)  | When the pump is connected to the mains (see Electrical connection on page 13)  
  ▶ Battery charges automatically, also during operation |
|             | When the pump is disconnected from the mains (see Electrical disconnection on page 15)  
  ▶ Pump switches to Battery Mode automatically |
|             | The battery is fully charged |
|             | The battery is partially charged |
|             | The battery is nearly empty.  
  ▶ A visual information is triggered (see Alarms / Actions on page 41).  
  When battery is empty (less than 10 minutes left), an alarm is triggered (see Alarms / Actions on page 41.) |

INFORMATION

- To optimize battery life, set the flow rate at 125 mL/h maximum and use the pump in battery mode several times until battery is discharged (بذل هبوب المحمولة).  
- If battery is failing, do not use the device. Return device to Fresenius Kabi sales representative as soon as possible.  
- Battery replacement must be performed by qualified and trained technical personnel in compliance with the technical manual and procedures.
4.2 Basic operations

Before using the pump, proceed to Quick Check Protocol (see Quick check protocol on page 39).

4.2.1 Switch-on

When using a pump on patient requiring special attention, ensure that a backup pump or gravity set are available for immediate use.

When switching on the pump, check that the auto test sequence is as described below.

Before switching on the pump, install holder and pump, see Installation on page 12.

Figure 4: Auto test

During the 2-second autotest:

- red, yellow and green LEDs blink;
- beep sounds (if sound level is low, melody is playing on low, if sound level is high, melody is on high).

4.2.2 Installing the giving set

4.2.2.1 Preparing the giving set

In order to protect user health, please follow clean aseptic handling procedures for container, set or feeding tube disposal.

<table>
<thead>
<tr>
<th>WARNING</th>
</tr>
</thead>
</table>
| - Only Fresenius Kabi giving sets can guarantee pump reliability. Please refer to the compatible giving sets (see Giving sets on page 63) and compatible nutrition fluids (see Intended use on page 5).
| - Check the giving set's intended use regarding the feeding protocol, especially for patients requiring special attention.
| - Check giving set and patient connection integrity before use. |
The fluid in the giving set and the bag/bottle must be within normal temperature conditions: +10°/+40°C.

### 4.2.2.2 Description of the Pinch clamp

- **Pinch clamp is open**
- **Pinch clamp is closed**

### INFORMATION
Patient must not be connected to the set when the Pinch clamp is open.

### 4.2.2.3 Installing the giving set in the pump

To connect / disconnect / change the container and feeding tube to the set, refer to the giving set "Instructions for use" on primary packaging.

### WARNING
For patients requiring special attention, another giving set must always be available.

1. Push up the lever to unlock the door ①. Open the door ②.

2. Position the Pinch clamp using the arrow marks indicating the direction of the flow ①. Insert the Pinch clamp until you hear the ‘CLIC’ ②.
3. On the sides of the pump, place the tube straight inside tube guides.

WARNING
Check that the giving set is correctly installed to avoid patient harm such as overfeeding, underfeeding.

4. Close the door 1. Push down the lever to lock the door 2.
When opening the pump door, the tube clamp is automatically closed (free-flow prevention system).

### 4.2.3 Priming the giving set

**WARNING**
Patient must not be connected to the pump when priming is performed.

**INFORMATION**
- To proceed to giving set priming, fill drip chamber half full by pressing gently.
- Ensure that liquid is flowing in the drip chamber after starting the pump.
- For giving sets without drip chamber, use only automatic priming.
- A beep sound will be heard every 30 seconds during priming.

#### 4.2.3.1 Priming with the pump

Amika pump allows two priming modes:
- automatic priming: Amika pump automatically fills in the giving set at maximum rate by depressing the automatic priming key.
- semi-automatic priming: Amika pump fills in the giving set at maximum rate as long as the semi-automatic priming key is kept depressed.

**INFORMATION**
Automatic and semi-automatic priming fill the giving set at a rate of 600 mL/h and are stopped after 17 mL (factory settings).

Make sure that priming is correctly completed before starting feeding.

**Automatic priming**

Auto priming can be stopped at any time:
At the end of automatic priming, it is possible to continue the priming using the semi-automatic priming function as defined below.

**Semi-automatic priming**

Press key to access to the priming modes. Press key to launch the priming. Keep it depressed during priming. Release it once priming is complete.

Press to go back to setting screen.

**WARNING**
At the end of priming, check that the set is correctly primed.

### 4.2.3.2 Priming without the pump (Manual priming)

1. Remove the giving set from the pump (see *Removing/Changing the giving set from the pump* on page 24).
2. Close Pinch clamp.
3. Connect food container to giving set and hang up.
4. Fill drip chamber half full by pressing gently.
5. Open Pinch clamp and prime to the end of the giving set.

Install the set in the pump to start feeding (see *Installing the giving set* on page 17).
4.2.4 Change feeding setting

**INFORMATION**

- A longer keypress provides faster scrolling.
- The flow rate of delivery must be adapted individually to the patient. Regular checks are required.

- Adjust feeding rate (mL/h)

  ![Feeding rate adjustment](image)

  Press + or - key to set the feeding rate.

- Adjust target volume (mL)

  ![Target volume adjustment](image)

  Press + or - key to set the target volume.

**WARNING** Make sure feeding parameters are checked before starting feeding (programming error can lead to overfeeding, underfeeding or delay of therapy).
4.2.5 Start feeding

1. Connect the giving set to the patient's enteral feeding tube.
2. Make sure that priming is correctly completed before starting feeding.
3. Check power supply before starting feeding.
   - Green light indicator if supplied by mains, or
   - Battery icon filled up if supplied by the battery.

4.2.6 Terminate feeding

- Stop feeding

When feeding is stopped, flow rate and target volume parameters can be adjusted. Then, feeding can resume.

- Reset the progress bar.
When the pump is stopped, progress bar can be reset by depressing the key for 2 seconds.

4.2.7 Switch off pump

Feeding shall be stopped before switching off the pump.

---

INFORMATION

- When feeding is on-going, the key is inactive: the forbidden key beep is triggered but feeding continues.
- When switched off, the pump retains the following information:
  - flow rate, volume and progress bar on the setting screen;
  - cumulative feeding volume;
  - target volume mode;
  - sound level, key beep activation / deactivation;
  - contrast and brightness;
  - feeding and Alarm history;
  - settings lock activation / deactivation;
  - time between 2 alarm sounds;
  - time for target volume almost reached message;
  - technical information.
- This information is saved even if the battery is disconnected with no time limit.

4.2.8 Removing/Changing the giving set from the pump

The mechanical properties of the administration set in association with the pump are designed to maintain pumping performance for a maximum of 5 L or a 24-hour period.

Replace the administration set according to your healthcare facility’s protocol or CDC guidelines.
Administration sets are supplied sterile and are indicated for single use.

**WARNING**

- The use of the same set for more than 24 hours can lead to therapeutic issues, such as infection, and uncontrolled flow.
- For patients requiring special attention, another giving set must always be available.

1. Push up the lever to unlock the door 1.
2. Open the door 2.
3. Remove giving set.

Install a new giving set in the pump (see *Installing the giving set* on page 17).

### 4.2.9 Keypad lock

Keypad lock prevents from unintentional tampering of pump settings.

When keypad is locked:

-  is displayed in the status bar;
-  is the only active key. If other keys are depressed, the forbidden key beep (2 beeps) is triggered, no action is undertaken and feeding continues.

Keypad can be unlocked by depressing the keypad lock key  for 2 seconds.
Unlocking the keypad is required to stop feeding, change feeding settings and enter the menu.

### 4.2.10 Mute alarm

To temporarily release alarm sound, press 🔊.

When a medium priority alarm is muted:

- the mute icon 🚀 is displayed in the status bar;
- the alarm symbol is displayed and the yellow LED keeps flashing until a corrective action is performed;
- the alarm sound is off for 2 minutes.

When a low priority alarm is muted:

- the mute icon 🚀 is displayed in the status bar;
- the alarm symbol is displayed and the yellow LED is lit;
- the alarm sound is off and an information signal sound (2 beeps) is emitted every 30 minutes.

For further information about alarms, see *Alarms / Actions* on page 41.
5 Pump menu

INFORMATION

- The menu is accessible when feeding is stopped.
- A beep sound is triggered when a forbidden key (not active in specific screens) is depressed.
- During a procedure, press \( \text{Stop} \) (\( \text{OK} \)) to validate the choice and go back to the setting screen.
- Press \( \text{Stop} \) (\( \text{⇔} \)) to go back to the previous screen (without validation).

5.2 Target volume mode

On this screen, target volume mode is activated 🎯. If you programme a feeding with no target volume and a feeding with target volume with respectively different flow rates, the respective flow rates are saved.

Press 🎯 to select target volume mode. Press ⏯️ or ⏯️ to deactivate / activate target volume mode (default setting activated). Press 🔄 to validate.

INFORMATION

- When target volume mode is deactivated, the target volume and the progress bar disappear from the display.
- If the settings lock is activated, the access code is required to activate / deactivate target volume.
5.3 Night mode

On this screen, night mode is activated.

Press to select Night or Day Mode. Press to activate Day Mode or to activate Night Mode. Press to validate Night or Day Mode.

INFORMATION
- When night mode is activated, display backlight and power LED are set to minimum level.
- In case of alarm, the backlight turns back to normal.
- Night mode is automatically deactivated after switching OFF the pump.

5.4 Sound

The pump is set by default to the highest sound level. It can be reduced to a lower sound level.

Press to select the sound level and key beep sound.
Press \(-\) / \(+) to select low or high sound level. Press \(+) to deactivate key beep or press \(-\) to activate key beep.

Press \(\text{START}\) to validate the sound level and key beep sound ON or OFF (default setting ON).

**WARNING**
Audible alarm signal level is adjustable. However, please ensure the user can hear alarms, especially when the pump is used on battery.

### 5.5 Settings lock

![Image showing settings lock process]

Press \(\text{START}\) key to configure Settings lock. Press \(-\) key to enter the access code.

Enter the access code by adjusting each digit (0 to 9) using \(-\) and \(+) keys and validate each digit by pressing \(\text{START}\). If you enter the wrong code, it is reset to 0 0 0.

Press \(+) to activate settings lock function.

When settings lock is activated:

- \(\text{Lock}\) is displayed in the status bar;
- target volume and flow rate cannot be changed;
- Accessible keys are: \(\text{Lock}, \text{START}, \text{Menu}\) with restrictions.

**INFORMATION**
- To get the access code, contact your Fresenius Kabi sales representative.
- Settings lock activation / deactivation isn’t modified after switching OFF the pump.
5.6 Cumulative feeding volume counter

Press \( \text{START} \) to display the cumulative feeding volume. The total feeding volume since last reset is displayed.

If needed, press \( \text{Clear} \) then \( \text{START} \) to clear the cumulative feeding volume (default setting).

5.7 Alarm history

Alarm events are automatically saved in the pump memory.

Press \( \text{START} \) to display the alarm events.
Press \( \text{Page} \), \( \text{Next} \) to switch from one alarm event to another.

**INFORMATION**
Alarm history indicates the type of alarm and the time elapsed since the event happened.

Example: a battery alarm occurred 9 days, 15 hours and 22 minutes ago.

### 5.8 Feeding history

Press \( \text{Start} \) to display the feeding events.

Press \( \text{Page} \), \( \text{Next} \) to switch from one feeding event to another.

**INFORMATION**
Feeding history indicates the delivered volumes, their associated flow rate and the time elapsed since their delivery.

Example: a volume of 1500 mL was administered at a flow rate of 125 mL/h, 13 days, 2 hours and 25 minutes ago.
5.9 Contrast / Brightness

Press \[\text{START}\]. Press \[-\] / \[+\] to set the contrast or the brightness.

Press \[\text{START}\] to validate.

5.10 Set time between two alarm sounds

Press \[\text{START}\]. Press \[-\] / \[+\] to set the time between two alarm sounds. Press \[\text{START}\] to validate.

**INFORMATION**
The access code is required to set time between two alarm sounds.

**WARNING**
Time between 2 alarms can be adjusted from 2.5 to 30 seconds with steps of 0.5 seconds. This adjustment can modify the perception of an alarm (Default value 2.5 seconds).
5.11 Set time for target volume almost reached message

Press \( \text{\text{START}} \). Press \(-\) or \(+\) to set the time for target volume almost reached message.

Press \( \text{\text{START}} \) to validate.

<table>
<thead>
<tr>
<th>INFORMATION</th>
</tr>
</thead>
</table>
| ■ Time between target volume almost reached message and target volume reached alarm can be adjusted from 0 to 59 min., with steps of 1 min (default setting 5 min.).
| ■ Access code is required to set time for target volume almost reached message. |

5.12 Technical information

Press \( \text{\text{START}} \) to access the technical information.

NOTE: the technical information menu displays:

- \( \text{SN} \) Pump serial number
- \( \text{Software version/ Hardware version} \)
- \( \text{Production date (mm/dd/yyyy)} \)
- Last maintenance date (mm/dd/yyyy)
- Total delivered volume
- Total functioning time
6 Cleaning and disinfection

6.1 Prohibited cleaning or disinfection agents

Do not use cleaning or disinfection agents that contain the following substances as these aggressive agents may damage the plastic parts of the device and cause the device to malfunction:

- trichloroethylene
- abrasive detergents

6.2 Precautions

Clean pump and pump holder as soon as they become contaminated with tube feed or drugs, and at least once a week.

After cleaning, the pump should be left to dry for approximately 5 minutes before being started or reconnected to the mains.

The pump must be cleaned after each patient usage by a trained nurse or assistant nurse.

![WARNING]

- The pump is not intended to be sterilized, it may damage the pump. The Amika is a non-sterile medical device.
- The Amika backpack must be cleaned before inserting the pump. Please refer to its specific accompanying documents.
- Make sure to use the original door when replacing it on the pump (check the serial number on the pump is the same as on the door). A door switch between pumps can lead to major pumping errors.

6.3 Recommended cleaning and disinfection agents

Didecyldimethylammonium chloride (example: Wip'Anios Excel by Anios).

Please contact the appropriate service, responsible for cleaning and disinfection products in your establishment for further details.

6.4 Cleaning and disinfection guidelines and protocol

![INFORMATION]

- Do not immerse pump and pump holder in liquids or let liquids enter device’s housing.
- Pump and pump holder are resistant to recommended cleaning agents (see Recommended cleaning and disinfection agents on page 36).
6.4.1 Cleaning Instructions

Prerequisites

- The pump is switched off.
- The power cord and all other cables are unplugged.
- The pump is disconnected from the holder.
- The air is at room temperature (20 to 25 °C).
- The operator is wearing suitable protective equipment.

Protocol

1. Place the pump and the holder on a cleaned surface or disposable underlay. The door can be removed from the pump to facilitate the cleaning.

   ![Image](image)

   **NOTE:** The door can be immersed. Clean it separately with running water.

2. During cleaning, do not turn the pump over to avoid liquid leak in the battery door.
3. Use a ready-to-use wipe to remove any major grime.
4. Thoroughly wipe down all exposed surfaces (housing, keypad, screw area, holder connection area, etc.) of the pump, from top to bottom. Gently wipe down the pump exposed mechanism and sensor area (tube guide, purple insert).

   A minimum cleaning of 1 minute is recommended (allow to remain visibly wet for 1 minute), until all organic matter is dissolved and removed. Do not allow liquids to run, leak, or drip into the pump housing. Use cotton wool to clean the contact peans.

   ![Image](image)

5. Repeat step 4 with the pump door (housing, lever, counter door) and holder (pole clamp screw, housing, etc.)
6. Using a fresh ready-to-use wipe, thoroughly wipe down all exposed surfaces. A minimum cleaning of 1 minute is recommended (allow to remain visibly wet for 1 minute), until all organic matter is dissolved and removed.
7. Wipe down the power cord.
8. Allow the device to dry completely at room temperature.
9. Make sure to use the original door when replacing it on the pump (check the serial number on the pump is the same as on the door).

6.4.2 Disinfection instructions

Prerequisites

- The cleaning protocol has been performed.
- The pump is switched off.
- The power cord and all other cables are unplugged.
- The pump is disconnected from the holder.
- The air is at room temperature (20 to 25 °C).
- The operator is wearing suitable protective equipment.

Protocol

1. Place the previously cleaned pump and holder on a cleaned surface or disposable underlay. The door can be removed from the pump to facilitate the disinfection.
2. During disinfection, do not turn the pump over to avoid liquid leak in the battery door.
3. Use a ready-to-use wipe to wipe down all exposed surfaces of the pump, holder and pump door (as described in cleaning protocol), making sure to cover all cracks, crevices, and hard-to-reach areas. Do not allow liquids to run, leak, or drip into the pump housing.
4. Using a fresh ready-to-use wipe, repeat steps 3. Ensure that the minimum contact time for each step is 3 minutes for bactericide activity (surface remain visibly wet for 3 minutes). Respect the indicated contact time from the manufacturer recommendations for the required antimicrobial activity.
5. Wipe down the power cord.
6. Allow the pump to dry completely at room temperature.
7. Make sure to use the original door when replacing it on the pump (check the serial number on the pump is the same as on the door).
# 7 Quick check protocol

## WARNING
- The following checks allow users to confirm device behaviour according to these instructions for use. Fresenius Kabi recommends performing these tests before connecting Amika pump to patients.
- If one or more checks do not comply with the right pump behaviour, please contact the appropriate department or Fresenius Kabi sales representative for additional verification.

<table>

8 Alarms and safety features

8.1 Alarms / Actions

The Amika pump has a continuous inspection system that operates as soon as it is in use. It is recommended that the user should be in front of the Amika pump, for best visibility of alarm display.

Please make sure the appropriate reaction to alarm is undertaken. A wrong or delayed reaction leads to a delay in therapy.

![WARNING]

The pump emits audible alarm signals. Audible alarm signals from medical devices may be masked by environmental noise. Ensure the alarm sound level is audible by the user, taking into account the environment.

The alarm sound level measures are:

<table>
<thead>
<tr>
<th>Settings</th>
<th>Pump on its holder</th>
<th>Pump inside a backpack</th>
</tr>
</thead>
<tbody>
<tr>
<td>High, medium, low priority alarms</td>
<td>Low Level &gt; 50 dB(A)</td>
<td>&gt; 45 dB(A)</td>
</tr>
<tr>
<td></td>
<td>High Level &gt; 60 dB(A)</td>
<td>&gt; 50 dB(A)</td>
</tr>
</tbody>
</table>

NOTE: dB(A) is the Level average pressure measured following ISO 3744

8.1.1 The different types of information signal or alarm

Feeding stops
Fail safe technical alarm
(High priority alarm)
Flashing red LED and buzzer sound

When a functional alarm or prior information to alarm occurs:

- to mute alarm sound, press 📣, see Mute alarm on page 26;
- detect the specific problem causing the alarm or prior information to alarm condition, by looking at the drawing displayed on the pump;
- to release alarm, press 📣;
- make a corrective action (see table below);
- restart feeding using the 📣 key.

**WARNING**
Identify displays, symbols and status in the table below, to understand the meaning and conduct the appropriate action.

</tbody>
</table>
9 Technical information

9.1 Performance

9.1.1 Essential performance

Essential pump performance is defined as follows in standard operating conditions:

- flow rate accuracy (± 7% at 50 mL/h with medical water);
- occlusion detection time (< 6 min at 50 mL/h with medical water);
- management of medium and high priority alarms, see The different types of information signal or alarm on page 41.

**WARNING**

Flow rate accuracy can be influenced by giving set configuration, tube stretching, fluid viscosity, fluid temperature, container height and feeding settings.

9.1.2 Flow Rate range

<table>
<thead>
<tr>
<th>Range</th>
<th>From 1 mL/h to 600 mL/h (default setting 50 mL/h)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Increments</td>
<td>1 mL/h from 1 mL/h to 100 mL/h</td>
</tr>
<tr>
<td></td>
<td>5 mL/h from 100 mL/h to 600 mL/h</td>
</tr>
<tr>
<td>Accuracy</td>
<td>± 7% at 50 mL/h, ± 10% for the whole range of flow rates</td>
</tr>
</tbody>
</table>

Test initial conditions following 60601-2-24. Cumulative volume measured on a two-hour period, with 25 mL minimum volume.

Container height: 50 cm.

9.1.3 Volume range

<table>
<thead>
<tr>
<th>Range</th>
<th>From 1 mL to 5000 mL (default setting 500 mL)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Increments</td>
<td>1 mL from 1 mL to 100 mL</td>
</tr>
<tr>
<td></td>
<td>5 mL from 100 mL to 5000 mL</td>
</tr>
</tbody>
</table>

9.1.4 Upstream and downstream occlusions

Occlusion alarm response time at different flow rates.

Threshold available for triggering downstream occlusion alarm:

- Occlusion will be detected for pressure 787.6 mmHg, ± 262.5 mmHg.
**Occlusion detection time**

<table>
<thead>
<tr>
<th>Flow rate</th>
<th>Downstream occlusion (1 m after the pump)</th>
<th>Upstream occlusion (5 cm before the pump)</th>
</tr>
</thead>
<tbody>
<tr>
<td>1 mL/h</td>
<td>5 hours</td>
<td>1 hour 40 min.</td>
</tr>
<tr>
<td>25 mL/h</td>
<td>9 min.</td>
<td>4 min.</td>
</tr>
</tbody>
</table>

**NOTE:**
Maximum occlusion pressure for the pump is 1875 mmHg, ± 150 mmHg.

**9.1.5 Volume Accuracy**

<table>
<thead>
<tr>
<th></th>
<th>Accuracy</th>
</tr>
</thead>
<tbody>
<tr>
<td>Limit to detect</td>
<td>≤ 25 mL</td>

</tr>
</tbody>
</table>
9.2 Technical characteristics

9.2.1 Operation mode
The Amika pump is a reusable device. The pump ensures fluid delivery in a continuous feeding mode, using pumping and clamping fingers to push the liquid to the patient.

9.2.2 Power supply specifications
The AC/DC adapter must be connected directly to the mains power socket.

| AC/DC adapter input       | AC input voltage: 100-240 Vac ± 10%  
|                          | AC input frequency: 50-60 Hz          
|                          | AC input current: 110 mA-205 mA       |
| AC/DC adapter output     | 9 Vdc ± 5 % / 1.0 A                   |
| AC/DC adapter cord length| Approximately 2.5 m                   |

9.2.3 Battery specifications

| Characteristics          | NiMH (Nickel-Metal Hydride)  
|                         | 4.8V 1.8-2.2 Ah Ni-MH         |
| Weight                  | Approximately 100 g           |
| Maximum charging time   | 6 hours                       |

9.2.4 Power consumption
Consumption of the pump in standard operating conditions: maximum 9 W.

9.2.5 Dimensions - Weight

<table>
<thead>
<tr>
<th></th>

</tr>
</tbody>
</table>

9.2.6 Trumpet curves
The trumpet curves show the variations in the mean flow accuracy over specific observation periods. The variations are presented on the maximum and minimum deviations of 5 pumps and 1 pump from the overall mean flow within the observation window.

The test protocol used to obtain these results is described in 60601-2-24.
The curves can be helpful in determining the suitability of feeding parameters for specific nutrition programmes.

**Giving set used:** Amika Varioline

**Fluid used:** distilled water, and Fresubin energy drink (1 mL/h only)

9.2.6.1 **Minimum flow rate:** 1 mL/h

**Sampling time:** 30 seconds

Start up and instantaneous flow rate (1 mL/h, over first 2h of the test period)

Trumpet curves for 2, 5, 11, 19, 31 minute observation windows (1 ml/h over second hour of the test period)

**Sampling time:** 30 seconds
Instantaneous rate (1 mL/h, over last 2 hours of set change interval, 24 hours)

Trumpet curves for 2, 5, 11, 19, 31 minute observation windows (1 mL/h, over last hour of the set change interval, 24 hours)

Sampling time: 15 minutes
Instantaneous flow rate (1 mL/h, over set change interval 24 hours)

Trumpet curves for 15, 60, 150, 330, 570, 930 minute observation windows (1 mL/h, over set change interval, 24 hours)

9.2.6.2 Intermediate flow rate: 25 mL/h

Sampling time: 30 seconds

Start up and instantaneous at intermediate flow rate (25 mL/h, over first 2h of the test period)
Trumpet curves for 2, 5, 11, 19, 31 minute observation windows (25 mL/h over second hour of the test period)

Instantaneous rate (25 mL/h, over last 2 hours of set change interval, 24 hours)
Trumpet curves for 2, 5, 11, 19, 31 minute observation windows (25 mL/h, over last hour of the set change interval, 24 hours)

**Sampling time: 15 minutes**

Instantaneous flow rate (25 mL/h, over set change interval 24 hours)

Trumpet curves for 15, 60, 150, 330, 570, 930 minute observation windows (25 mL/h, over set change interval, 24 hours)

### 9.2.7 Compliance with standards

</tr>
</tbody>
</table>
### General requirements, tests and guidance for alarm systems in medical electrical equipment and medical electrical systems
Conform to IEC 60601-1-8

### Requirements for medical electrical equipment and medical electrical systems used in the home healthcare environment
Conform to IEC 60601-1-11

![CE Mark] 0123
Conform to the 93/42/EEC Medical directive
0123 : Notified body number (TÜV SÜD Product Service GmbH, Ridlerstrasse. 65, 80339 München, Germany)

**NOTE:**
The full list of applicable standards is available upon request. The device is protected against leakage current and does not disturb ECG or EEG devices.
10 Transport, storage and recycling conditions

10.1 Storage and transport conditions

During transport, the Amika pump shall not be removed from its pole or rail when carrying feeding devices, especially when feeding is running.

Check that the AC/DC adapter is connected and operational after transport of the pump.

The pump should be used under specified storage and transport conditions listed below to ensure pump performance and to avoid pump malfunction.

For further information about storage and transport, see Use environment on page 6.

10.2 Storage

Please make sure the pump is stored in an appropriate manner so as to avoid pump malfunctioning.

INFORMATION

■ The storage area must be clean, organized and compliant with the storing conditions mentioned above.
■ The Amika pump must be handled with care during storage.

WARNING

■ If the device is not used for longer than 2 months, remove the battery and store it as per storage conditions above.
■ If the device is stored without removing the battery, charge it at least once a month by connecting it to the mains for at least 6 hours.
■ Amika must be cleaned and disinfected prior to storage (see Cleaning and disinfection on page 36).

10.2.1 Prepare the device for storage

In order to prepare the device before storage, proceed as specified below:

1. Be sure the pump is not being used on a patient.
2. Switch pump OFF and remove installed giving set (see Removing/Changing the giving set from the pump on page 24).
3. Disconnect pump power cord (see Electrical disconnection on page 15).
4. Remove the pump and its holder from pole or rails (see Removing the pump from the pump holder on page 14).
5. Clean the pump (see Cleaning and disinfection on page 36).
6. Handle the pump with care and store it in a compliant area.
10.2.2 Install the device after storage

**INFORMATION**

- If the battery has been removed for storage, please contact your biomedical department in order to replace the battery into the device prior to using the pump.
- We recommend charging the battery, by leaving the device connected to the mains power supply for at least 6 hours. After prolonged storage, a few minutes may be required before using the pump (an hourglass will be displayed).
- We recommend that the "Amika Quick check protocol" is performed when the device is installed after transport, in case of prolonged storage, or before being used on a new patient.

10.3 Recycling and disposal

Before disposal, remove battery from the device. Batteries, accessories and devices with this label must not be disposed of with the general waste. They must be collected separately and disposed of according to local regulations.

For further information regarding waste processing regulations and dismantling, contact your local Fresenius Kabi sales representative.
11 Guidance and manufacturer’s declaration on EMC

The Amika pump is intended to be used in the electromagnetic environment specified below. The customer or the user of the Amika pump should ensure that it is used in such an environment.

Excluding the cases described in this manual, the pump operation must systematically be checked by a qualified operator, should the pump be installed in the vicinity of other electrical devices.

For further information on EMC compliance, please refer to the Amika Technical Manual.

<table>
<thead>
<tr>
<th>WARNING</th>
</tr>
</thead>
</table>
| ■ Prolonged exposure to X-ray environments can damage the electronic components of the device and influence the flow rate accuracy. For a safe usage, we recommend to:  
  – always put the device at the maximum distance from the patient and the source;  
  – limit the presence of the device in such environments.  
  ■ In the case of electromagnetic disturbances, if the essential performances, see Essential performance on page 48, are lost or degraded, the consequences for the patient can be: overfeeding, underfeeding, delay of therapy, trauma. |

11.1 Electromagnetic compatibility and interference guidance

The Amika has been tested in accordance with the electromagnetic compatibility standards applicable to medical devices. Its immunity is designed to ensure correct operation. Limitation of the emitted radiation avoids undesirable interference with other equipment.

The Amika is classified as a Class B device according to CISPR 11 emitted radiation. The user might be required to take mitigation measures, such as relocating or re-orienting the equipment.

Use of accessories and cables other than those recommended by Fresenius Kabi, could result in increased emissions and / or decreased immunity of the Amika system.

If the Amika is placed near devices such as HF surgical equipment, X-ray equipment, NMR, cell phones, DECT phones or wireless access points, portable RFID reader, large scale RFID reader and RFID Tags, it is essential to observe a minimum distance between the Amika and this equipment (see Recommended separation distances between portable and mobile RF communication equipment and pump on page 60). If the Amika causes harmful interference or if it is itself disrupted, the user is encouraged to try to correct the interference by one of the following actions:
  ■ reorient or relocate the Amika or patient or disruptive equipment;
change the routing of cables;
■ connect the Amika mains plug on protected / backed-up / filtered supply or directly on UPS circuit (uninterruptible power supply);
■ increase the separation between the Amika and patient or disruptive equipment;
■ connect the Amika into an outlet on a different circuit from that to which the patient or disruptive equipment is connected;
■ in any case, whatever the context, the user should conduct interoperability testing in a real situation to find the right setup and good location.

11.2 Guidance and manufacturer’s declaration - Electromagnetic immunity

The Amika pump is intended to be used in the electromagnetic environment specified in the Amika Technical Manual.

The customer or the user of the Amika pump should ensure that it is used in such an environment.

11.3 Recommended separation distances between portable and mobile RF communication equipment and pump

The Amika pump is intended to be used in an electromagnetic environment in which radiated RF disturbances are controlled.

Users of the Amika may prevent electromagnetic interference by maintaining a minimum distance between portable and mobile RF communications equipment (transmitters) and the Amika as recommended below and according to the maximum output power of the communication equipment (transmitters).

<table>
<thead>
<tr>
<th>WARNING</th>
</tr>
</thead>
<tbody>
<tr>
<td>■ At 80 MHz and 800 MHz, the separation distance for the higher frequency range applies.</td>
</tr>
<tr>
<td>■ These guidelines may not apply in all situations. Electromagnetic propagation is affected by absorption and reflection from structures, objects and people.</td>
</tr>
<tr>
<td>■ The device should not be used next to other equipment. If adjacent use is necessary, the device should be observed to verify normal operation in the configuration in which it will be used (Amika pump with a AC/DC adapter, a USB cable and a nurse call cable).</td>
</tr>
</tbody>
</table>
12 Services

12.1 Warranty

12.1.1 General conditions of warranty

Fresenius Kabi guarantees that this product is free from defects in material and workmanship during the period defined by the accepted sales conditions, except for the batteries and the accessories.

12.1.2 Limited warranty

To benefit from the materials and workmanship guarantee from our sales representative or agent authorized by Fresenius Kabi, the following conditions must be respected:

- Fresenius Kabi is not liable for loss or damage to the device during transport.
- The device must have been used according to the instructions described in this user guide and other accompanying documents;
- The device must not have been damaged when in storage, at the time of repair, or show signs of improper handling;
- The device must not have been altered or repaired by non-qualified personnel;
- The internal battery of the device must not have been replaced by a battery other than that specified by the manufacturer;
- The serial number (ID/N°) must not have been altered, changed, or erased.

**INFORMATION**

- In case of failure to comply with these conditions, Fresenius Kabi will prepare an estimate for repairs covering the parts and labour required.
- When a return and/or a repair of the device are required, please contact your Fresenius Kabi sales representative.

12.1.3 Warranty conditions for battery and accessories

Batteries and accessories may have specific conditions of warranty. Please contact your Fresenius Kabi sales representative for additional information.

12.2 Quality control

Upon request by the hospital, a quality control check can be performed on the Amika every 12 months.

A regular quality control (not included in the guarantee) consists of various inspection operations listed in the technical manual. Please refer to the technical manual or contact your Fresenius Kabi sales representative.
12.3 Maintenance requirements

**WARNING**
- Perform preventive maintenance at least once every 2 years. This includes battery and membrane replacement. To avoid pumping performance deterioration, it is important to follow maintenance requirements.
- Preventive maintenance must be performed by qualified and trained technical personnel in compliance with the technical manual and procedures.
- The qualified personnel must be informed if the device is dropped or if any malfunction occurs. In this case, the device must not be used. Please contact your biomedical department or Fresenius Kabi.
- When replacing components, only use Fresenius Kabi spare parts.
- When using the device on a patient, no maintenance action must be performed.

Life cycle of Amika pump: 10 years provided that the maintenance is properly performed as described above.

12.4 Service policy and rules

For further information concerning device servicing or use, please contact our sales representative or our Customer service.

If the device must be sent for servicing, contact Fresenius Kabi to have packaging shipped to your facility.

Clean and disinfect the device, because of potential harm or risks to staff health. Then pack it in the provided packaging and ship to Fresenius Kabi.

**INFORMATION**
Fresenius Kabi is not liable for loss or damage to the device during transport.
13 Ordering information

Amika pump is available in several countries, contact your Fresenius Kabi sales representative for orders (Z0441XX).

13.1 Instructions for use

Several 'Instructions for use' documents translated into local languages are available. Please contact your Fresenius Kabi sales representative for orders.

13.2 Giving sets

Do not use Amika giving sets to deliver liquids using gravity method, except the Amika set Varioline Comfort that can be used either for feeding by pump or by gravity.

Giving sets are single use. Whatever the giving set, the performance of the pump is maintained.
