

Freka® PEG Pro with ENFit

... for patients without gastric motility disorders & without risk of aspiration.

Getting a PEG does not mean the end of a self-determined life. Rather, it is the opportunity to decisively improve the quality of life through a good nutritional status.

To meet the individual needs and find the most comfortable solution for the patients:

- Available in FR 12, 14, 16 and 20*
- Versatile usage
 - Extension with an intestinal tube is possible
 - Changeover to a balloon system, like Freka Belly Button

Several placement videos and a comprehensive digital aftercare training, can be explored under www.enteral-nutrition.com.

* Freka PEG FR 9 and FR 15 are further available

Ordering information

	FR size	Packaging	Colour Code	Art.No.
Freka® PEG Pro, ENFit	FR 12	1 x 1	Grey	M90800346

Freka® PEG Pro

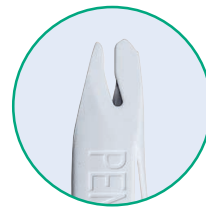

Engineered for safe use at every single step

Percutaneous Endoscopic Gastrostomy*
The choice for long-term enteral nutrition (> 4 weeks)

Safe usage even when pressed for time

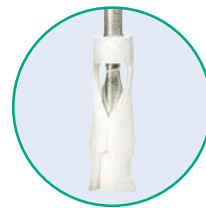

Safety Scalpel

- Safe and multifunctional usage
- Retractable blade for needlestick safety before and after usage
- Intuitive pen-like activation
- Protected blade to cut the PEG thread

Safety Puncture Cannula

- Trokar with protective cap increases safety after puncture and during waste disposal
- Air valve in puncture cannula reduces air escaping from the stomach during endoscopy

Safe ENFit connectors

- Dedicated to enteral application
- Avoids misconnections

Safe and convenient hard blistered tray

- Easy to remove components
- Ready to hand
- Sterile contents fixed by cover during aseptic provision

Safe and convenient documentation

- Patient brochure to educate handling for patients
- 4 sticker with batch number and product name to ease correct documentation
- Patient implant card which enables and facilitates tracking
- Instructions for use for healthcare professionals

Comfortable and safe placement

Common pull method for placement

- Easy fixation of PEG tube with thread
- Radiological control possible
- Easy to combine with an Intestinal Tube for jejunal feeding e. g. gastroduodenal motility problems
- Possible changeover to a balloon system, like Freka Belly Button

Easy aftercare

- Compact and exchangeable ENFit connectors
- Transparent tube material allows fluid control
- Colour coded accessories make component exchange easier
- Tube clamp prevents reflux of stomach contents

Reliable product quality

for optimal patient comfort,
tolerance and safe feeding

- Tissue-friendly polyurethane tube
- Soft and flexible fixation plates made of silicone rubber
- Latex-free, PVC-free
- Proven for long durability for low exchange frequency*
- Safe enteral connector ENFit, according to the international safety standard ISO 80369-3
 - ENFit System provides a locking function to avoid accidental disconnection
 - Luer-free IV-incompatible connection System ENFit avoids misconnections
